NSH-2002: The multi-functional interface between your hard drives and your computer

The NesteQ NSH-2002 All-In-One MultiDock is the ideal product to connect your hard drives easy and conveniently with your computer. You can easily connect any hard drives with ATAPI (IDE) or Serial-ATA (SATA) interface to the NSH-2002 All-In-One MultiDock, and make them accessible to your computer via a USB2.0 port.

You can even connect more than one device at the same time with the small size external power supply included in the package. The power supply is equipped with an On-/Off switch and can be used worldwide.

The NesteQ NSH-2002 All-In-One MultiDock has an OTB (One-Touch-Backup) button to easily backup your files to the connected hard drive. Select any folder with the included software beforehand. When you are ready to copy the files, just push the OTB-button, which is illuminated by a blue LED.

Due to its size, the NesteQ All-In-One MultiDock is also the perfect companion for Notebook computers. To protect your connected hard drives, we suggest that you use the silicone enclosures which are also available from NesteQ.

Measurements H x W x D: 15mm x 65mm x 75mm
